## Former Camp Adair Remedial Investigation Formerly Used Defense Site

U.S. Army Corps of Engineers requests Right-of-Entry from Landowners

The U.S. Army Corps of Engineers (USACE) is currently conducting a remedial investigation and feasibility study (RI/FS) for unexploded ordnance at the formerly used defense site (FUDS) Camp Adair near Corvallis, Oregon. To gather information about this project, USACE is requesting affected property owners to complete a right-of-entry allowing investigations to determine if military munitions are present on each property. The investigation may involve surveying with a metal detector or other specialized instrument, investigating subsurface items to determine if unexploded ordnance is present, and collecting soil and/or water samples. If you live in the RI/FS boundary shown on Figure 1, consider participating by completing a right-of-entry. The USACE encourages all affected property owners (Figure 1) to contact the personnel listed below to discuss the right-of-entry process in more detail or ask for more information. If you have been requested to provide a right-of-entry for your property as part of this investigation, questions about the right-of-entry process can be directed to U.S. Army Corps of Engineers Seattle District, Real Estate Division Realty Technician Mr. Kurtis A. Nold, at telephone: (206) 316-4374 or email: [Kurtis.A.Nold@usace.army.mil](mailto:Kurtis.A.Nold@usace.army.mil).
